

ELECTRICAL ENGINEERING, MEASUREMENT AND CONTROL TECHNOLOGY, AUTOMATION

Construction of traffic routes Maintenance and new construction of traffic routes and areas

Our traffic route construction experts take on all the tasks required to ensure safe and reliable operation and the construction of new traffic areas in line with your needs.

Traffic routes serve the operational as well as the overall motorized and non-motorized traffic, i.e. the road and rail traffic of the entire logistic operation as well as the car, bicycle and pedestrian traffic. Operational traffic areas have various functions, which serve the loading and unloading, the storage of goods as well as the connection between buildings. All in all, they must enable safe and secure use and be designed for the corresponding traffic loads.

Our services:

- New construction of roads, paths, parking lots etc.
- Production of sealing surfaces according to asphalt data sheet
- Repair of road pavements
- Paving work, surface Drainage
- Signposting, road markings
- Track construction work including operational equipment (track crossings, track roads, track barriers, etc.)
- Track tests, construction tests according to DIN 1076
