

Future-proof plant planning & erection

CONSTRUCTION MANAGEMENT

Process engineering / EMC trade construction management

During the plant erection phase our specialists coordinate the construction effort in conjunction with process engineering and the electrical installation, so that you can smoothly complete the construction project on time.

Trade construction management requires a balanced blend of high trade specific skill levels and management capabilities. Combining these skills is the key to confidently managing the specific trades in relation to your larger projects. Our appropriately trained and experienced employees implement these requirements in their daily work. They also manage the entire electrical installation under the scope of planned construction projects in the process industry.

Our services:

- Coordinate construction deliverables related to EMC and VT
- Supervise the proper workmanship for construction deliverables
- Consult and coordinate with interfacing trades
- Document activity
- Change order management
- Manage activity-related safety
- Ensure compliance with technical regulations and customer specifications
