

Future-proof plant planning & erection

ELECTRICAL ENGINEERING, MEASUREMENT AND CONTROL TECHNOLOGY, AUTOMATION

Lighting / emergency lighting

We develop concepts and execute lighting and emergency lighting systems, both in new construction and existing buildings.

Our tasks also include classifying buildings and studying and assessing workstations. We also compile construction code specifications and occupational safety concerns, and prepare the required technical equipment concept. We are at your side throughout the entire project progression: from the detailed planning phase and the procurement of emergency lighting systems, to processing, and even including the installation and commissioning.

In addition, we can offer the light engineering inspection iaw. DIN 5035-6 and DIN EN 1838, can organize the acceptance test by a qualified expert or by a qualified inspection expert, and can prepare inspection and maintenance planning documentation.

Your experts

Get in touch with us - we will be happy to advise you.
