

Future-proof plant planning & erection

ELECTRICAL ENGINEERING, MEASUREMENT AND CONTROL TECHNOLOGY, AUTOMATION

Process automation

Leading-edge automation concepts are crucial for highly-available, safe, and efficient plant operations. Our specialists take care of the planning documentation and the implementation of your plant automation systems.

Starting with the apparatus and component concept for your plants, we develop cost-effective automation concepts and procure the related systems. Our specification document lays out the requirements and becomes the basis for the actual software engineering work for the PLS, PLC, SPLC. Prior to actual operations, we simulate the system with our customers and jointly conduct the software acceptance testing.

The package of deliverables is rounded out by:

- Commissioning – including the field device and visualization
- Configuring of Modbus, Profibus and OPC links
- Operator and service staff training
- Migration and system updates of hardware and software on existing systems
- Integration into higher-level office and production networks
