

Subustainable growth at the chemical park GENDORF

ELECTRICITY, NATURAL GAS, AND UTILITIES SUPPLY

Networks

As a network operator with our own distribution networks, we bring electricity and natural gas to your plant – safely and reliably.

An electricity supply failure can have extremely expensive outcomes in a chemical operation. We therefore do everything in our power to make sure it never gets to that. Our electricity grids are highly-available and extra redundant, from the external power utility to your connection at the chemical park GENDORF. A reliable network is also available for your natural gas requirements. The upstream network operator hands over the natural gas at a pressure of roughly 45 bar (overpressure). Natural gas is distributed within the chemical park at a pressure of 6 bar (overpressure).

Our services:

- Network operations for electricity and natural gas
- Redundant network structure
