

Efficient plant operations & maintenance

SHUTDOWNS: PLANNING AND EXECUTION

Shutdown planning

Our professionally planned shutdown will reduce the downtime of your plant and help to reduce costs, while also ensuring high safety and quality.

Our understanding of a professionally planned shutdown of process engineering plants is not limited to a sequence of shutdown points. We start by documenting the shutdown points, tap into experience and know-how, and develop optimized scheduling and cost planning documentation based on these.

Our services:

- Document shutdown points in the customer's plants
- Estimate time requirements per shutdown point
- Determine resource requirements
- Prepare optimized shutdown planning documentation by taking into account available resources
- Prepare tender-ready documentation
- Document lessons learned from the shutdown
