

SERVICES FOR BIOGAS PLANTS

Incident response planning for biogas plants

If the plant is governed by incident response laws, significant new requirements must be observed with the implementation of the so-called SEVESO III Directive – even by operators of biogas plants. We provide you with customized and plant-specific consultation.

Larger biogas plants with a rated mass of 10 tons of raw biogas are governed by the Incident Response Directive. We assist you with the implementation of requirements, ranging from the applicable informational obligations, to safety management systems, and even including the necessary application documentation (spacing expert appraisal).

Our services:

- Assistance with preparing the necessary notices and applications pursuant to Incident Response Directive or BImSchG (including spacing expert appraisal)
- Consult on potential hazards and corresponding preventive and defensive measures
- Consult on concept for incident prevention
