

SERVICES FOR BIOGAS PLANTS

AwSV plants

Lawmakers have imposed special requirements on biogas plants in AwSV (Verordnung über Anlagen zum Umgang mit wassergefährdenden Stoffen [Directive on Plants That Handle Water Hazardous Substances]) As certified AwSV experts, we will provide you with consulting support for the planning and implementation phase and will audit your plants prior to commissioning or on a recurring basis.

Since AwSV went into effect, operators of biogas plants are subject to special building code requirements for their plants. The experts of the InfraServ GENDORF AwSV-certified expert organization will proactively support you in the implementation.

Our services:

- Consult on all relevant water protection regulations applicable for proposed plants or for changes, expansions, and decommissioning of existing plants
- Consult on or prepare notices and permit applications mandated by water management laws (e.g. finding of suitability)
- Prepare gap analysis documentation of your plant to the new AwSV
- Conduct audits and prepare expert appraisals by our in-house AwSV-certified expert appraisal organizations
- Classify substances into water hazard classes (WHKs)
- Prepare and maintain an AwSV plant structure
- Consult on physical requirements (e.g. collection basins, site layout)
