

Future-proof plant planning & erection

PROCESS RELIABILITY

Process information technology

Properly structured data facilitate monitoring and a wide range of analyses for profitable, legally-compliant, and resource-efficient plant operations. Even more so, when the data are obtained from process control systems that are reliably archived over the long term and can be accessed quickly. We are your partner for these tasks.

Comprehensive system integration is an important prerequisite for structured data management. We record data from various platforms that we then compile and archive. Convenient solutions for visualization, analysis, monitoring, and reporting give you a straightforward analysis, monitoring, and research capability for your data. Our solutions can be used based on a modular system structure and a need-based design, customized to your needs. Individual related services include e.g. peak load monitoring and warning functions related to network fee management.
