

Subustainable growth at the chemical park GENDORF

DISPOSAL

Wastewater treatment

We operate high-performance plants for treating industrial wastewater. We leave nothing to chance for the disposal of your wastewater – a commitment you can count on.

Our biological wastewater treatment plant treats all production wastewater generated at the chemical park GENDORF. It tackles a waste water volume that corresponds to a major city with roughly 120,000 residents. The entire plant is designed such that wastewater treatment operations can be maintained even when individual apparatus, basins, and other elements are taken out of service. The metrology center of the wastewater treatment plant is staffed around the clock and integrated into the emergency management of the chemical park GENDORF.

Our services:

- Consult on and review matters related to permit law and water management laws
- Prepare permit applications and provide assistance for contact with regulators
- Treat and clean wastewater
- Analytics and testing of wastewater biodegradability
- Monitor all legally relevant limit values
- Maintain legally compliant records
- Organize transport
