

Efficient plant operations & maintenance

PREDICTIVE MAINTENANCE

Vibration measurements and diagnostics

Industry 4.0 and the associated Maintenance 4.0 represent a new approach for operating plants: a departure from reacting to problems toward proactively recognizing these – this is where we assist you.

Competent team supports you with the diagnosis of data from condition monitoring systems to assess the machinery condition so that the problems can already be identified before they occur.

Our services:

- Perform vibration tests on machinery
- Diagnostics, including evaluation of metrology readings, actionable recommendations and optimization proposals
- Operational balancing of plants
- Analyze startup process
- Remote diagnostics for online and off-line systems • Analyze critical vibrations on machinery, drives, and production plants
- Document and archive data
