

Efficient plant operations & maintenance

SHUTDOWNS: PLANNING AND EXECUTION

Shutdown execution

Assisted by professional control and processing, our experienced team keeps your plant shutdowns on-schedule and on-budget, while also meeting the required quality and safety standards.

Executing shutdowns of process engineering plants requires all participants to perform at a high level. In addition to known and scheduled tasks, unplanned activities also need to be processed, as these typically only become known during the course of the shutdown – generally within a very tight schedule. We take care of the complete processing, control, and follow-up for plant shutdowns.

Our services:

- Prepare the plant shutdown
- Coordinate all participating trades on the basis of existing planning documentation
- Control deliverables throughout the shutdown timeframe
- Monitor and document progress
- Change order management throughout the shutdown
- Schedule, cost, and quality monitoring
- Recommissioning support
- Completion documentation
