

Efficient plant operations & maintenance

MAINTENANCE

Pump maintenance

Our specialists restore the full functionality of your pumps, pump systems, mechanical seals, and impellers of all types so that your plant can be placed back into service as quickly as possible.

Professional maintenance on pumps, pump systems, mechanical seals and impellers is the basis for restoring operations after a malfunction. Our service experts support you in all related matters from dismantling to maintenance and assembly, irrespective of which manufacturer the pumps were sourced from.

Our services:

- Assemble and dismantle the entire pump unit during operations
- Troubleshoot, including damage report and photographic documentation
- Repair pumps and pump systems in accordance with manufacturer's specifications or based on specific customer requirements
- Dynamic balancing of all rotating components
- Function and performance testing on the pump test stand
- Optical laser alignment during assembly
- Procure spare parts, fabricate custom spare parts
- Optimize pump systems
- Service workshop officially certified in accordance with ATEX
