

MEASUREMENT, TESTING, AND MONITORING OF ENVIRONMENTAL REQUIREMENTS

Workstation and HAZMAT measurements

As the employer, you are required by the HAZMAT Directive to determine and assess the inhalation exposure for activities with hazardous materials. We take care of this task on your behalf with a suitable metrology concept that meets the specific requirements of your work areas.

The employer's responsibility for protecting its employees against various exposures has been continuously increasing for years. The law also plays a central role in addition to the sensitization for health as the most important human asset. We are a neutral metrology institute and have an extensive range of experiences and expertise in relation to determining and assessing hazardous materials. As a competent partner, we are delighted to support you with implementing occupational safety legal requirements specific to you.

Our services:

- Qualitative determination of organic air constituents
- Quantitative determination of exposure to hazardous materials
- Person specific and locally fixed measurements:
 - Alveolar dust and breathable dust
 - Inorganic compounds
 - Metals
 - Volatile organic compounds (VOC)
 - Coolants
 - Bacteria and mold
- Assessment pursuant to applicable rules and current limit values published by the Federal Institute for Occupational Safety and Occupational Medicine [Bundesanstalt für Arbeitsschutz und Arbeitsmedizin] (technical rules for hazardous materials)
- Hazard assessments
